Anaxis Asset Management is launching Anaxis Income Advantage, a UCITS fund benefitting from a global and flexible approach to corporate bond market

This new corporate bond fund complements the existing product range and responds to the investors' needs, who have expressed a strong interest in this type of products. The fund adopts a more global and flexible approach in order to capitalise on the best opportunities in the credit market.

Anaxis Income Advantage is a discretionary UCITS fund which is actively managed, based on in-depth fundamental issuer analysis. The fund focuses on companies with well-defined sustainable business models, which are protected by high entry barriers and benefit from strong growth momentum and a flexible cost structure. The fund does not invest in the financial sector, which has low visibility due to the lack of transparency.

On launching the fund, Thibault Destrés, who is co-managing the portfolio, declared "like our current range of funds, Anaxis Income Advantage adopts a conviction-based approach, drawing on an investment process centred on bond-picking, but deploying a more global and flexible strategy, which enables us to incorporate our best ideas and capitalise on credit market conditions and economic and financial outlook".

Key features:

- 5% annualised performance objective, net of fees.
- Dynamic and flexible management to control credit risk.
- Global investment universe (portfolio heavily focused on developed markets).
- Broad regional and sector diversification.
- Investment strategy free of constraints in terms of rating, index and maturity.
